

FAST Configuration Control Changes

Difference between ? and 2.0

7/18/03

- 1) The Agenda_DB project and web service was created (Land).
- 2) The frames were added (Land).

Difference between 1.30 and 1.31

6/25/03

- 1) Allow individual laptops to use FAST databases without having to attach to the hub. Lets technicians work independently of the hub on board the ship, back in their hotel rooms or in other locations.
- 2) Data entered into individual laptops (while disconnected from the Hub) then upload data to the hub when reconnected to the hub.

Difference between 1.25 and 1.30

6/23/03

- 1) When creating an Upload disk: for OMMS or SNAP, the file is now called CSMP + JulianDate (ie: CSMP125.txt)
- 2) The file is created in C:\Inetpub\wwwroot\download\CSMP125.txt and also in A:\CSMP125.txt
- 3) If you don't have an A: drive then an error will occur and you have to copy the file from C:\Inetpub\wwwroot\download yourself.
- 4) FAST now has the ability to transfer data from a remote database to a server by clicking a button..

Difference between 1.24 and 1.25

6/13/03

- 1) Security Administration put in.
 - a) Validation,Parts, and Uploads only for Admin login
- 2) Not Validated filter button on Existing 2Kilo page.
- 3) Removed Change Upload function.
- 4) Password protection on login screen.
- 5) Changed Database3.xml to include ShipName.
- 6) Made database.aspx to allow you set which database your working on.
- 7) Login screen shows which ship and database location.
- 8) WorkCenter,APL,RIN,ESWBS,EIC,Location are read only fields.

Difference between 1.23 and 1.24

6/10/03

- 1) Took CSMP off of 2Kilo pages. The CSMP was slowing down the system. If you want to view the CSMP you have to go the CSMP page.
- 2) Took the CK and Build Standard Statements links off the pages. They weren't working properly. Will put them back when working properly.
- 3) Added error checking for the Drop down lists. If there was no database entry before the code would fail. FAST now has error checking to see if the

- database fields are empty for drop down lists.
- 4) Added the Category drop down list to the EOC page. This will be for reporting purposes.
 - 5) Worked on the Completed 2Kilo page.

Difference between 1.22 and 1.23

- 1) Parts drop down list shows which parts have been validated.
- 2) When creating a New 2Kilo FAST has multiple filters to help find the equipment that you are working on.
- 3) The Next button is now located on the New 2Kilo page. This button forces user to the EOC page.
- 4) EOC now has full Root Cause pick list.
- 5) Database Changes
 - a) Parts table: RRAM (Yes/No field)
 - b) Parts table: TotalCost (Currency)
 - c) CSMPED table: Parts (Yes/No field)

Difference from 1.2 and 1.22

- 1) Changed the colors of the drop down lists from blue to aquamarine.
- 2) Included a change APL button to the existing 2Kilo page. This allows a user to change a bad APL for a good 2Kilo.
- 3) 2Kilo drop down list is now sorted by WorkCenter JSN.
- 4) 2Kilo drop down list now show which 2Kilos were validated/uploaded.
- 5) Parts page now includes a RRAM checkbox.
- 6) Parts page completely re-worked.
- 7) Buttons now link properly: EOC, Parts, Completed, Existing 2Kilo, ...
- 8) Ability to view next or previous 2Kilo.
- 9) Snap/OMMS upload disk works properly. Had to take out white space at end of line.
